## SELECTED PROJECTS

**Databricks on AWS** June 2025 – November 2025
*Financial Services*
Design and implement a Databricks data platform on AWS for processing web and user tracking data

- Design network, compute, storage, roles and privileges
- Build the cloud resources storage, compute, roles and privileges
- Build and configure the Databricks resources down to the catalog level
- Automation with Terraform and Github Actions
- Connect data sources DMS and Snowplow
- Connect PowerBI using gateways, establish authentication and privilege management

| | |
|---|---|
| Role | Cloud Architect & Engineer |
| Skills | AWS, Databricks, Terraform, GitHub Actions, Cloud Security |

**Data Flow on Azure** May 2025 – June 2025
*Travel and Logistics*
Analysis of existing data flows from sources to reports, adaptation of reference architecture, and multi-stage implementation planning

- Assess and document the status quo, identifying architectural strengths and weaknesses
- Identify root causes triggering performance degradation and bottlenecks
- Design a strategic roadmap spanning from the status quo to a modern target solution

| | |
|---|---|
| Role | Solutions Architect |
| Skills | Requirements Analysis, DWH Architecture, Microsoft Azure Data Lake, Tableau, Data Analytics |

**AI Application Platform on Azure** January 2025 – May 2025
*Travel and Logistics*
Development of an enterprise AI platform supporting chatbots, document analysis and RAG systems

- Design the architecture for the AI platform
- Design and implement authentication, roles and privileges
- Implement automated infrastructure provisioning with Infrastructure as Code
- Create reliable, secure, and fast continuous deployment (CI/CD) pipelines
- Knowledge transfer sessions to enable internal teams

| | |
|---|---|
| Role | Cloud Architect & Engineer |
| Skills | Solution Design, Cloud Engineering, CI/CD, Microsoft Azure DevOps, Terraform |

**Compare AI options on-premise and with cloud components** November 2024 – January 2025
*Telecommunications*
Strategy options for AI applications, comparing feasibility and costs of on-premises infrastructure versus Azure cloud services

- Evaluate multiple architectural deployment scenarios: On-Premises, Hybrid/Cloud Services, and Cloud-Only
- Perform comprehensive total cost of ownership (TCO) calculations for each use case
- Prepare a decision proposal and strategic briefings for executive management

| | |
|---|---|
| Role | Requirement Analyst |
| Skills | Solution Design, Requirement Engineering |

**AI Application Hosting Platform** August 2024 – October 2024

*Service*

Evaluate and onboard 10 AI applications onto a unified, secure platform on Azure

- Design a secure tenant architecture featuring isolated private and shared resources
- Redesign to work with private endpoints
- Implement centralized authentication and authorization with Microsoft Entra ID

| | |
|---|---|
| Role | Cloud Architect & Engineer |
| Skills | Requirement Analysis, Cloud Security, Private Networking, Microsoft Entra ID, Azure DevOps, T |

**Enterprise Chatbot Development** April 2023 – June 2024

*Retail*

Development of a GPT-powered chat bot based on a helpdesk database

- Data Analysis and Text Preprocessing of FAQ Articles
- Search optimization, rephrasing and reranking
- Security Report Evaluation
- Design the microservices architecture
- Implement application security, data masking, and compliance guardrails
- Integrate into existing frontend
- Establish an extended test suite

| | |
|---|---|
| Role | Software and Infrastructure Engineer |
| Skills | RAG Architecture, CI/CD, GitHub Actions, LLMs, Prompt Engineering, Azure, GCP, AI Search |

**Cloudmigration** July 2020 – February 2023

*Telecommunications*

Migration and operation of over 150 analytical applications, containerization of legacy applications

- Stabilize, scale, and manage a self-service corporate cloud platform
- Execute architectural redesign and cloud-native migration for an analytics portal
- Drive organizational transformation by introducing Kubernetes, automated CI/CD workflows, and cloud-first methodologies

| | |
|---|---|
| Role | Team Lead, Engineer |
| Skills | AWS, GitLab, Kubernetes, Linux, Azure, Azure DevOps, Python, Terraform |

**Cloud Based Redesign of a Data Warehouse** July 2019 – January 2020

*Energy*

Architectural analysis and evaluation of the legacy data warehouse infrastructure and existing ETL framework

- Formulate a structured migration roadmap transitioning toward a Data Vault 2.0 methodology
- Map and visualize data lineage across systems modeled as a network graph
- Provision and automate isolated, reproducible database environments for developers
- Build a functional Data Vault architecture prototype to validate design concepts
- Conduct professional collaborative workshops focusing on modern Data Warehouse design principles

| | |
|---|---|
| Role | Data Strategist |
| Skills | Data Governance, Graph Visualization, Python, Snowflake |
